| WP7 | DISS/OUT | Dissemination & Outreach Activities | KCL | M1 | M48 |

Recruitment Process

- The submission process was setup electronically (by email to mitn-crossfire@google.com)
- Each submission acknowledged, and assigned a reference number
- The call remained open for 2 months
- An extension was given for a few positions

Recruitment Process

- A total of 1177 applications were received for all the institutions
- 437 unique applicants (2.69 applications per applicant)

Ph.D. / Early Stage Researcher Positions in the University of Athens - MARIE CURIE PROJECT CROSSFIRE

The Department of Informatics and Telecommunications at the University of Athens (UoA), Greece, offers fully-funded PhD positions for two Early Stage Researchers (ESRs) in the context of the FP7 Initial Training Network (ITN) project CROSSFIRE (<http://gain.di.uoa.gr/crossfire>). Under an architectural and component level perspective, the project approaches the emerging LTE-A network, which will be populated by uncoordinated and vast number of small cells (micro, pico and femto). We primary aim to provide a holistic understanding on issues such as co-channel interference from randomly located small-cells (unplanned deployment), efficient utilization of the scarce spectrum (via cognition), self-organization (SON) and QoE at the end users, under the assumption that LTE-A networks share a common physical infrastructure. CROSSFIRE will analyze and propose network virtualization solutions, a technology which is envisioned to transform the operation of cellular networks in the years to come.

Description

PhD position 1 (UoA-1): "Network virtualization component level algorithms for mobility management and RRM in LTE-A heterogeneous wireless networks"

The work of the ESR will be concerned with: i) survey on network virtualization for mobility management (MM) and radio resource management (RRM) in LTE-A heterogeneous wireless networks, ii) proposal of novel network virtualization component level algorithms for MM and RRM, iii) proposal of enhanced analytical and system-level simulation methodologies towards validating the performance of network virtualization component level algorithms for MM and RRM, iv) proposal of novel technical features or improvements on the LTE-A system to support future network virtualization, advanced MM, and enhanced RRM in heterogeneous deployments.

Training Activities

Training Programme at a glance

- The ESR is placed at the centre of the training programme!

Training Activities executed

- The training framework included the following activities:
 - Seminars
 - Complementary courses
 - Participation to plenary meetings
 - Local structured PhD courses
 - Co-supervision of Master Theses
 - Secondments
 - Participation to international conferences and workshops
 - Co-organizing two workshops and a final conference

Seminars

- **Paris, July 3-5, 2013:**
 - ▶ **S1: Recent advances in mobile communications.**
 - ▶ LTE/LTE-A now and in the future (C. Gruet)
 - ▶ Network coding (D. Lucani)
 - ▶ Mobility Management for Multitier Cellular Networks: Research Challenges and Modeling (D. Xenakis)
 - ▶ Massive MIMO and HetNets: Benefits and Challenges (J. Hoydis)
 - ▶ **S4: Network Virtualization for LTE-A networks.**
 - ▶ Refactoring Heterogeneous Mobile Networks with SDN: The Road to Network Virtualization (R. Riggio)
 - ▶ Mobile Network Virtualization (A. Timm-Giel)
 - ▶ Software Defined Networks in WLAN: Challenges and Opportunities (C. Chaudet)
 - ▶ Virtualisation and the role of OpenFlow in the Mobile Networks (T. Mahmoodi)

Seminars

Roberto Riggio on “Refactoring Heterogeneous Mobile Networks with SDN: The Road to Network Virtualization”

Nicola Baldo on “NS3 and LTE Simulation Tools”

Maria Martini on “Quality of experience measurement & management in wireless multimedia systems”

Alan Law on “Overview on small cell deployments”

David Grace on “Cognitive Green 5G Wireless Networks – How can Intelligence Save Energy?”

Lindsay Frost on “3GPP –ETSI Overview”

Complementary Courses

- Heidelberg, March 4-6, 2014:
 - ▶ **CC1: Writing scientific papers and patents**
 - ▶ Understanding Patents (V. Young)
 - ▶ Patent process (V. Young)
 - ▶ Finding/Searching for Patents (IPR Team)
 - ▶ Standards Essential Patents (J. Swetina)
 - ▶ **CC3: Standardization**
 - ▶ 3GPP –ETSI Overview (L. Frost and H. van der Vreen)
 - ▶ 3GPP RAN (N. Scully)
 - ▶ 3GPP-SA2 Architecture (A. Kunz)
 - ▶ BBF MBH and Energy Efficiency (K. Samdanis)
 - ▶ SDN/ONF Overview (S. Schaller)
 - ▶ IETF Overview (J. Quittek)

Complementary courses

Marco di Renzo on "Papers Submission, Review Process, Publication Impact and Plagiarism"

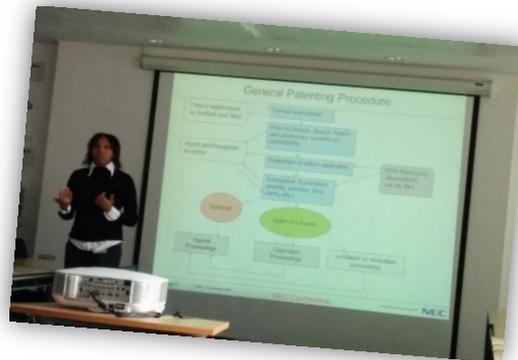

Aygen Kurt-Dickson on "General Tips on Winning Grants"

Hands on Presentations session

Maydo Arderiu on "Designing your Personal Marketing Plan to Find your Place in Organizations"

Veda Young on "Understanding Patents and Patent Process"

CROSSFIRE ESRs

What is Crossfire?

CROSSFIRE (unCooRdinated netWOrk StrategieS for enhanced InterFereNce, mobility, radio Resource, and Energy saving management in LTE-Advanced networks) is a Multi-Partner Initial Training Network (MITN) Marie Curie project that is focused on providing forward-looking solutions for Long Term Evolution-Advanced (LTE-A) network co-existence including aspects ranging from the physical layer such as co-channel interference and cognition to the user perception of the service, i.e., Quality of Experience (QoE). The project will analyze and propose network virtualization solutions for LTE-A networks, a technology which is envisioned to transform operation of cellular networks in the years to come.

Secondments

Dissemination Activities

Activities executed

- **Website**
 - Including secure area (wiki) and public area to disseminate results
- **Conference and journal publications**
 - Top scientific journals, magazines and conferences (including demos)
- **Standardization**
 - Driven mainly by large industrial partners
- **Workshops and conference organization**
 - Two workshops and a final conference
- **Industrial dissemination day**
 - Strengthen the collaboration of ESRs with industry

Website

The screenshot shows the website for CROSSFIRE, an FP7 Initial Training Network (ITN). The header features the project name and a navigation menu with links to Home, Challenges, Approach, Training, Participants, Dissemination, Job Positions, and Contact. Below the header, there is a grid of logos for the participating institutions: University of Athens, King's College London, UOC (Universitat Oberta de Catalunya), CNRS, NEC, iquadrat, Steinwurf, and Vodafone. To the right of these logos is a map of Europe with red arrows pointing to specific locations in the UK, France, Spain, and Greece, each accompanied by a partner's logo. Below the map are four numbered tabs (1, 2, 3, 4). The main content area contains a title and two paragraphs of text describing the project's goals and structure.

An Initial Training Network for LTE-Advanced networks

CROSSFIRE (unCooRdinated netwOrk StrategieS for enhanced interFeRenCe, mobIliTy, radio Resource, and Energy saving management in LTE-Advanced networks) is a Multi-Partner Initial Training Network (MITN) Marie Curie project that is focused on providing forward-looking solutions for Long Term Evolution-Advanced (LTE-A) network co-existence including aspects ranging from the physical layer such as co-channel interference and cognition to the user perception of the service, i.e., Quality of Experience (QoE). The project will analyze and propose network virtualization solutions for LTE-A networks, a technology which is envisioned to transform operation of cellular networks in the years to come.

It will create a fully-integrated and multi-disciplinary network of 12 Early Stage Researchers (ESRs) working in 8 first-class institutions distributed in 6 European countries. The consortium is formed by 3 Universities, 1 Research Center and 4 Private Companies. This Network will offer to a group of newly recruited ESRs a cross-sectorial environment to shape their long-term research view and get fundamental methodological tools on various research fields such as, network virtualization, self-organization,

First CROSSFIRE Workshop

A Special Session in IEEE CloudNet2014

IEEE CloudNet'14
Special Session

SS1: Network Virtualization and QoE
in Future Mobile Cellular Networks

■ Call for Papers

Future mobile cellular networks will have to topologically encompass an increased number of smaller heterogeneous cells (micro, pico, femto), in order to support the ever increasing requirements on data rates from mobile users. Pushing the cells closer together leads to an inevitable increase in the co-channel interference which can have a deleterious effect in the network performance if not combated adequately. To this end, it is envisioned that the complexity of network operation and management will significantly increase, posing critical threads on the performance of these emerging cellular networks. At the same time, network sustainability pushes the use of sharing access network infrastructure between various operators, using advanced network virtualization techniques which have to be developed based on the special characteristics of these wireless networks. Network virtualization is now emerging as one of the key technologies to allow the co-existence of multiple operators over the same infrastructure; this is a significant evolution from current network operation, but with no clear roadmap on how it will evolve over time and the way that will be applied in the scope networks. These two emerging and inter-related trends bring a set of new challenges in terms of network management. What also needs to be added is the performance of the network not only in terms of Quality of Service (QoS) that can support, but together with the overall experience that can provide to the users, the so-called Quality of Experience (QoE), including therefore human and subjective methods in the understanding of the network performance.

In this new situation, the aim of the special session is to reveal critical open issues and provide solutions towards fully virtualized and dynamic mobile cellular networks towards improved QoE. The contributions requested include but are not limited to:

- Architectural aspects for enabling dynamic network sharing via network virtualization.
- Protocols and advanced algorithms for dynamic network virtualization.
- Near optimal utilization of the available spectrum (cognition, self-organization, etc.).
- Network interference mitigation and avoidance in conjunction with QoS considerations.
- Decentralized self-organization of heterogeneous networks.
- Bridging the gap between QoE and QoS.

The session is organized by the FP7 Marie Curie Initial Training Network CROSSFIRE (MITN 317126).

Costa Navarino | Messinia | Greece

The 7th International Workshop on Quality of Multimedia Experience (QoMEX 2015), which was held 26-29 May 2015 in Costa Navarino, Messinia, Greece has been a success. The high quality work and the great participation in a friendly and breathtaking venue have left deeply to all of us a memorable experience.

The papers of QoMEX 2015 are already on IEEE Xplore at <http://ieeexplore.ieee.org/xpl/mostRecentIssue.jsp?punumber=7128763>

The videos of the keynote talks are available at http://i-guide.org/?page_id=1276

Special Session: “QoE in 4G mobile networks and beyond”

26-29 May 2015 | Costa Navarino, Messinia, Greece
www.qomex.org

Call For Papers

Future mobile networks will have to encompass an ever increasing amount of user-traffic, accompanied by incremental user-demands in terms of experienced quality. In 4G networks and beyond, users are expected to be “always best-connected”, in a highly dense and heterogeneous environment. Unfortunately, QoE in mobile networks has always been an afterthought, and thus, QoE management architectures and mechanisms need to be devised as an add-on layer. Nevertheless, we may envision that the networks of the future (5G, smart grid, etc.) can be originally designed with inherent QoE characteristics and QoE provisioning mechanisms. Identifying this opportunity, the aim of this special session is to reveal critical open issues and provide solutions towards designing the QoE-aware and QoE-centric mobile networks of the future.

The contributions requested include but are not limited to:

- Re-designing mobile networks with QoE prerequisites;
- QoE-centric network and application control mechanisms;
- Cross-layer, context- and user-aware QoE management;
- Network architectures and signaling towards QoE support;
- SDN and NFV as enablers for QoE provisioning;
- Modelling and mapping relationships between QoS and QoE;
- QoE assessment for future 5G-based application scenarios;
- QoS and QoE monitoring in 4G networks and beyond;
- Standardization activities of QoE methodologies;
- Towards 5G QoE ecosystems (monetization of QoE, ELAs, etc.);
- QoE management for OTT services, cloud, gaming, etc.;
- Methodologies & methods of quality assessment;
- Subjective or objective evaluation of experiences on mobile devices;
- QoE in the area of IoT, smart-grid and M2M.

For author submission guidelines, please visit www.qomex.org

This session is organized by the Marie Curie Initial Training Network CROSSFIRE (MITN 317126).

Important dates:
Submission of full papers: 20/3/15
Notification of acceptance: 10/4/15
Camera-ready papers: 25/4/15

Outreach Activities

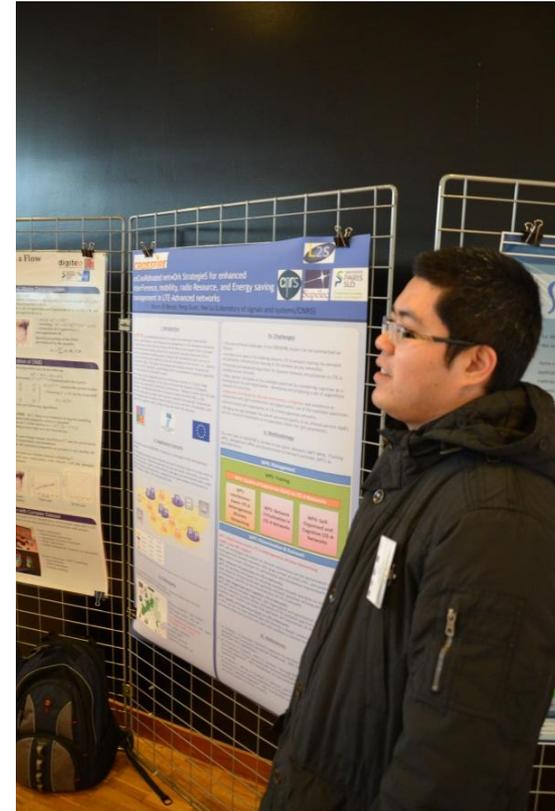

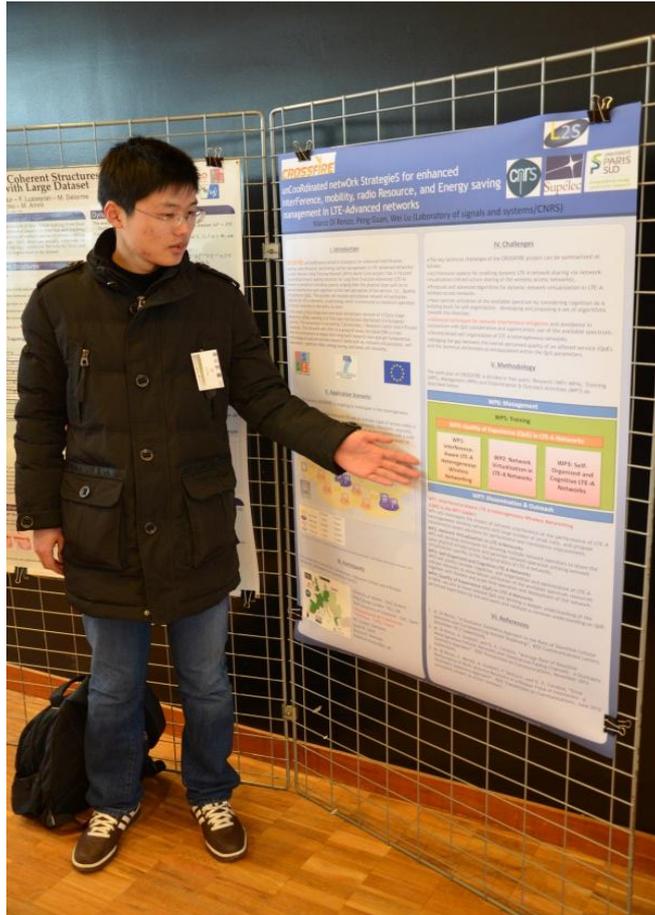

Activities executed

- **Project open days:** Separate location, public visits, tour at the labs, hands-on experience and lectures.
- **E-Newsletter:** Every 3 months including highlights of project achievements.
- **Social media:** Twitter and LinkedIn used to allow direct access to wide audiences.
- **Video clips:** Two video-clips (one in the middle and one close to the end).
- **Public talks:** One public talk per ESR per year.

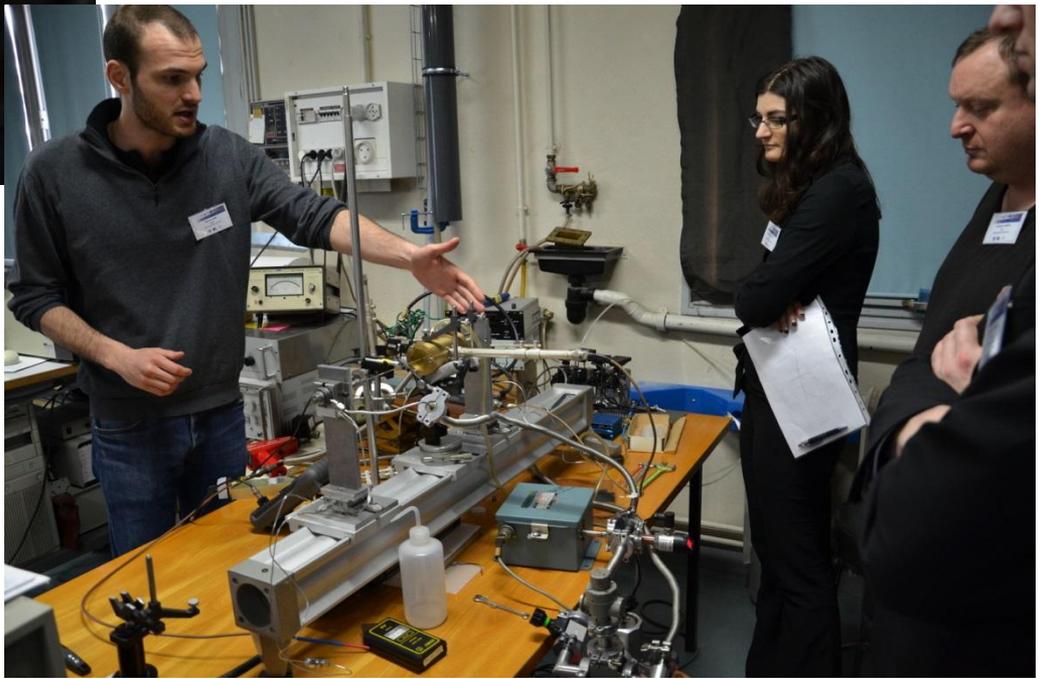

1st Open Day – Part 1 (18/01/13 Univ. Paris Sud)

1st Open Day – Part 2

(17/04/13 Univ. Paris Sud)

2nd Open Day (11/07/14 King's College London)

Future Wise Views on 5G

The evolution towards 5G wireless networks has not only sparked strong interest from the wireless research community but also created a mass media interest as a technology which will propel and accelerate technological innovations in our every day living. 5G research is envisioned to tackle some of the most fundamental limitations of existing cellular networks, inter-alia, higher data rates, increased end-to-end performance, as well as lower latency, energy consumption and overall cost. But, and most importantly, it is also about creating seamless experience to the users by enabling personalized Quality of Experience. At the same time, we are currently witnessing novel proposed architectural frameworks in this direction that facilitate the idea of softwarization of mobile networks for faster innovation and quick roll-outs.

The aim of this half-day event is to provide strategic views on the path towards 5G networks as well as outlining key research challenges and opportunities.

Date and Venue 11th of July 2014, King's College London, Strand Campus, room S1.12, 14:00 – 17:30

Public Meeting supported by the **FP7 ITN-CROSSFIRE Project**

Issue highlights

This issue is released less than a month after the organization of the CROSSFIRE's 3rd plenary meeting, which took place in Barcelona, on the 4th-5th of November 2013. Hence, this newsletter issue is mainly dedicated on information about this meeting and about the complementary courses that followed and were delivered to

- Following the previous column on "Recruitment of ESRs" of past newsletters, where all twelve ESRs had been presented, the new column "Meet the project seniors" has been created. The background of three out of nine of the project seniors is given in this 3rd issue. This column will be completed after three

organized by the project and the call for contributions is already available.

- Information on new publications and on previous publications' recognition is also available.

Project status

This newsletter issue marks the completion of the first year of the CROSSFIRE project, which was launched on September 2012.

The project's progress may be briefly characterized by the following stand-out items:

- All Early Stage Researchers (13 ESRs) have been hired by
- The first two training seminars have been already delivered to the ESRs and the first two complementary courses are currently being planned for November 2013.
- The first results of the research of CROSSFIRE members have been published in top journals and

Eirini Liotou

Short CV

Eirini Liotou received the Diploma in Electrical & Computer Engineering from the National Technical University of Athens in 2006. She obtained the MSc in New Technologies of Informatics & Telecommunications from the University of Athens, where she was ranked first in her graduating class and the MSc in Communications & Signal Processing from the Imperial College of London.

She has significant work experience as a Software Engineer in Siemens AG and as a Senior Software Engineer in Siemens Enterprise Communications, where she worked in the R&D department for the SME business sector. She joined the UCI Call Processing team, involved in the development activities in the areas of call control features, VoIP signaling protocols and UI programming of high-end telephones.

Currently, she is working as a researcher in the Green, Adaptive and Intelligent Networking Group within the Communication Networks Laboratory of the Department of Informatics & Telecommunications in the University of Athens. In parallel, she is pursuing her PhD in the area of Quality of Experience (QoE) characterization and provision in LTE-A heterogeneous networks. She speaks Greek, English, German and Spanish.

Salvatore Costanzo

Short CV

Salvatore Costanzo received his B.Sc. in "Telematics Engineering" in 2007 and his M.Sc. (honors) in "Telecommunications Engineering" in March 2012, both from the University of Catania, Italy.

Salvatore participated in various European and Italian projects. In 2007 and 2009, he worked with the Italian National Inter-University Consortium for Telecommunications (CNIIT). With CNIIT he was involved in the design and implementation of network protocols for low power wireless networks within the "CRUISE" and "NEWCOM++" European projects. From April 2012 to March 2013 he worked as a developer of wireless sensor network protocols within the "Sentinella" Project at Department of Electrical, Electronics and Computer Engineering (DIEEC) of the University of Catania.

Salvatore is currently an Early Stage Researcher in the context of project CROSSFIRE and a PhD candidate in the Department of Informatics and Telecommunications of the University of Athens.

His research interests focus on analysis and solutions for wireless, ad-hoc and sensor networks, with a particular emphasis on network virtualization and software-defined network architectures.

ESRs after CROSSFIRE

- **Researcher at Université Pierre et Marie Curie, France**
- **Patent Examiner at European Patent Office, Netherlands**
- **Research Engineer at Huawei Technologies**
- **DevOps Network Planner at Sky, UK**
- **Senior Researcher at Vodafone Group R&D, UK**
- **Standardization Delegate at Fraunhofer, Germany**
- **Assistant Researcher at Aalborg University, Denmark**
- **Research Fellow, University of Athens, Greece**

How to get funded

- **Not a typical research project**
 - Research is a tool for training
- **Career development of young researchers**
 - All activities should be around the ESRs
- **Very competitive scheme**
 - Acceptance rate 2016 <8%
- **Read the call carefully, line by line**
 - Don't omit anything

How to get funded

- **Consortium complementarity**
 - Academic, industrial, wide expertise
- **Research through a common technical target**
 - All ESRs working for that measurable target
- **Include all means of training**
 - Both direct and complementary
- **Many dissemination and outreach activities**
 - Part of the ESRs training
- **Show the impact to the ESRs career**

An Initial Training Network for LTE-Advanced networks

CROSSFIRE (unCooRdinated netWoRk StrategieS for enhanced interFeRenCe, mobility, radio Resource, and Energy saving management in LTE-Advanced networks) is a Multi-Partner Initial Training Network (MITN) Marie Curie project that is focused on providing forward-looking solutions for Long Term Evolution-Advanced (LTE-A) network co-existence including aspects ranging from the physical layer such as co-channel interference and cognition to the user perception of the service, i.e., Quality of Experience (QoE). The project will analyze and propose network virtualization solutions for LTE-A networks, a technology which is envisioned to transform operation of cellular networks in the years to come.

It will create a fully-integrated and multi-disciplinary network of 12 Early Stage Researchers (ESRs) working in 8 first-class institutions distributed in 6 European countries. The consortium is formed by 3 Universities, 1 Research Center and 4 Private Companies. This Network will offer to a group of newly recruited ESRs a cross-sectorial environment to shape their long-term research view and get fundamental methodological tools on various research fields such as, network virtualization, self-organization, cognitive radio, energy saving, and small cell networks.
