# EmS business expenditure

2003	ICT R&D business expenses/ total R&D business expenses	ES R&D business expenses/ total R&D business expenses	Ratio of business expenditures for R&D in ES/ICT
EU25	17%	9%	56%
US	36%	15%	42%
JP	30%	19%	62%
Rest of Asia	19%	10%	54%
World	27%	13%	49%

2003-2009 in PPP (Purchasing Power Parity)	ICT R&D Business Expenses	ES R&D Business Expenses	ICT R&D Business Expenses	ES R&D Business Expenses
	2003		2009	
EU25	21.7 b€	12.1 b€	34.6 b€	22.9 b€
US	68.0 b€	28.3 b€	103.2 b€	54.9 b€
JP	24.8 b€	15.4 b€	40.7 b€	29.3 b€
Rest of Asia	14.2 b€	7.6 b€	23.1 b€	15.2 b€
World	128.7 b€	63.4 b€	201.6 b€	122.3 b€

# Economic importance of EmS

2002-2004 Industry domains	Average annual growth rate for Embedded System market	% of embedded electronics in final value (2004)	% of embedded electronics in final value (2009)
Automotive	10%	20%	36%
Avionics/ Aerospace	14%	n.a.	n.a.
Industrial automation	7%	>13%	22%
Telecommunications	15%	>23%	37%
Consumer electronics and intelligent homes	15%	>14%	41%
Health & medical equipment	18%	25%	33%

# The Artemis Technology Platform

*Advanced research and technology in embedded intelligence and systems*

## Aim and scope

- **Develop and drive joint European vision on Embedded Systems**
  - R&D and educational challenges
  - structural challenges: IPR, open source, standards, infrastructure,...
- **Align fragmented R&D efforts along common strategic agenda at Community, intergovernmental and national levels**

ARTEMIS Steering Board includes 10 of the top-25 EU companies in terms of global R&D

Information Society  
Technologies

# ARTEMIS SRA

---

European Commission

---

# ARTEMIS SRA links to ICT in FP7 (WP 2007-2008)

---

- **Main locus in ICT WP**
- **But also in Capacities programme...**
  - Research infrastructures
  - Regions of knowledge
  - Research potential (for convergence and outermost regions)
- **SF synergies**

# Embedded Systems Design

40 MEuro

## ● Target outcomes

- Theory and methods for Embedded System Design
  - Key issues are heterogeneity, composability, predictability
  - International cooperation is encouraged
- Suites of interoperable design tools for rapid design and prototyping
  - Research will contribute to one or more of:
    - 1) Interoperability of tools from SME vendors
    - 2) Consolidating tool developers joint RTD work
    - 3) Open tool frameworks

SRA  
foundational  
R&DSRA  
3<sup>rd</sup> priority

## ● Expected impact

- Increase the productivity of system development by an order of magnitude
- Stimulate growth of high-tech European Embedded Systems Design companies

Reinforce scientific and technological leadership in the engineering of complex systems

# Computing systems

## Target outcomes

- **Novel architectures for multi-core computing systems**
  - Architectures and system software for scalable and custom systems incorporating multiple networked, symmetric or hierarchical reconfigurable processing elements
  - Key issues are versatility in cost, power, performance, lifecycles; reliability and availability
- **Reference architectures for generic embedded platforms**
  - Development of a limited number of reference design/architectures
  - Key issues are composability, networking, robustness/security, diagnosis/maintainability, resource management, evolvability, integration

SRA  
foundational  
R&D

SRA  
1st priority

## Expected impact

- **Availability of inexpensive generic platforms with high European added value enabling European supplier companies to increase their market share**
- **Develop European competences in the use of high-end computing to enable the development of new applications**

# Networked Embedded and Control Systems

## ● Target outcomes

- Middleware platforms for embedded systems
  - Key issues: composability, minimum power consumption, open to 3<sup>rd</sup> parties
  - Emphasis on programmability, reconfiguration, privacy and trust
- Cooperating objects and Wireless Sensor Networks
  - Spontaneous cooperation of objects in spatial proximity
  - Emphasis on new methods and algorithms, hardware/software platforms for distributed execution and programming and tools for self-organising systems
- Control of large-scale complex distributed systems
  - Models, communication delays, uncertainty, close loop with sensor networks
  - Key issues: efficiency, robustness, safety, security
  - Targets: manufacturing plants and public infrastructures

SRA  
1st priority

## ● Expected impact

- Enable entirely new services and applications
- Make large infrastructures more efficient, flexible and productive
- 100% plant availability, reduce maintenance and accidents

# Outline

---

- **The ARTEMIS Technology Platform**
  - ...and links to the FP7 ICT work programme
- **Joint Technology Initiatives in IST**
- **Information on ARTEMISIA**

# JTIs – motivation and benefits

- **Bringing together fragmented efforts, building critical mass (ERA)**
  - Combine, for the first time, national, EC and private funding in a single R&D programme that focuses on joint objectives (SRA)
- **Ramping up R&D investment in Europe**
  - Provide incentives to industry and Member States to increase R&D investments
- **Combining the strengths of trans-national (EUREKA) and European programmes – while overcoming their weaknesses**
  - No budget uncertainty (e.g. compared to Eureka)
  - No duplication of evaluation/monitoring procedures (as in Eureka)
  - Shorter time-to-contract
  - No additional red tape for participants

**This could pioneer new ways for running industrial R&D programmes in Europe !**

# *Proposed Joint Technology Initiatives in IST*

To implement parts of the Strategic Research Agendas of ENIAC and ARTEMIS, aligning fragmented R&D efforts at European level in the fields of:

## *Nanoelectronics:*

addressing the needs of silicon-based technologies & beyond

- shrinking of CMOS logic & memory devices
- development of value-added functions for System-on-Chip or System-in-Package solutions
- equipment & materials
- design automation

## *Embedded Computing*

*Systems:* ubiquitous, interoperable & cost-effective embedded systems

- reference designs and architectures
- middleware for interoperability and seamless connectivity
- integrated software tools for rapid development & prototyping

# JTI – Principles (1)

- **Single R&D and Innovation programme**
  - Focusing on SRA
- **Governance principles**
  - Transparency & openness in participation & operations
  - Industry has the lead
  - Three-way separation of powers:
    - **Industrial policy**
    - **Decisions on allocation of public money**
    - **Operations**
- **Operations**
  - Accountability
  - Unified common processes (established beforehand) for:
    - **Annual calls to implement the SRA**
    - **Proposal evaluation and project selection**
    - **Project monitoring and reporting**

## JTI – Principles (2)

- **Financing through commitment of resources from all stakeholders**
  - Industrial:
    - **cash for JTI operational cost and some non-R&D actions**
    - **in-kind for participation in R&D projects (>50%)**
  - Member & Associated States:
    - **Yearly earmarked budgets**
  - European Commission:
    - **Funding to participants in projects in proportion to national payments**
  - Other possible sources of funding
    - **EIB, structural funds,...**

# JTI Legal and Governing Structure (draft)

Information Society

# Synergetic approach for executing SRA

## ETP ARTEMIS

Industry-driven long-term vision

Common pan-European SRA

Overall coordination and policy alignment in ERA

Joint project monitoring and programme assessment

### FP7

#### **Upstream**

**IST collab. R&D**

**ERC, Mare Curie**

**Research  
infrastructure**

### JTI

#### **Downstream**

**Unified  
processes**

**National  
contracts**

**EC top-up**

### EUREKA

#### **Downstream**

**ITEA2, MEDEA+**

**National  
contracts**

**No EC top-up**

### National Programmes

# JTI vs. FP

- **Upstream vs. downstream**
  - Industrial vs. foundational R&D
    - Inquiry-driven, targeted proactive and targeted reactive foundational research
  - Industrial vs. academic participation
  - Funding rates (50-75% in FP)
- **Who would participate**
  - FP: all MAS
  - JTI: all MAS but more attractive to organisations from countries committing budget
